

## Chemoxy Abstract (suggested)

### Speaker: Dr Allan Jensen

*Chemoxy has broad expertise in recovering and recycling solvents from sources across Europe, also offering custom manufacture which represents alternative options for processing streams or using the recovered material. Chemoxy can recover product for return or can take ownership of it, building on its existing markets for recovered solvents and proprietary low toxicity solvents to offer a professional outlet for by product streams, representing lower environmental impact than other routes.*

*Few other solvent recoverers have an integrated offering covering recovery, custom processing of downstream products and a complementary own product range. Chemoxy not only has the equipment and expertise to recover and transport highly volatile or potentially difficult to handle materials but also has the knowledge to sell or derivatise them along with a Responsible Care approach to disposal of any remaining residues.*

*Dr Jensen will illustrate this approach with examples of value added waste streams*

*Dr. Allan Jensen*
