Systems and machine concepts

- → Integrated Lab Systems (ILS)
 - Customized Solution with flexible robot handling
 - Standard Modules, Integration of lab instrumentation
 - Special modules
- → Compact Lab Station (CLS)
 - Small systems without robot handling
 - Designed for starting with HTS and lab automation
 - Stepwise approach possible
- Spray application and measuring solutions
 - Stand-Alone (lab module)
 - Automated process
 - Integration possible

Progress in High Throughput Formulations

	At the beginning	Today
Dosing	Dispensing Water-like liquids Flowing powders	Pastes, Cremes, Binders Wet Powders, Spheres
Mixing	Shaking, Vortexing	High Shear, Milling
Sample Size	µl to ml (Arrays, plates)	As big as necessary, as small as possible
Sample Preparation	Only in combination with dispensing (filling cavities, dipping,)	Standard preparation processes
Characterisation	Not available or special method (difficult correlations)	Integration oft standard and established tests
Workflows	Only Filling and mixing	Integrated Application and Characterisation

Packaging Technology

Commonly Available Dosing Technology

- Individual systems for high and low viscosity
- Either cleaning or individual systems for different materials
- Design dependent on dosing quantity

and:

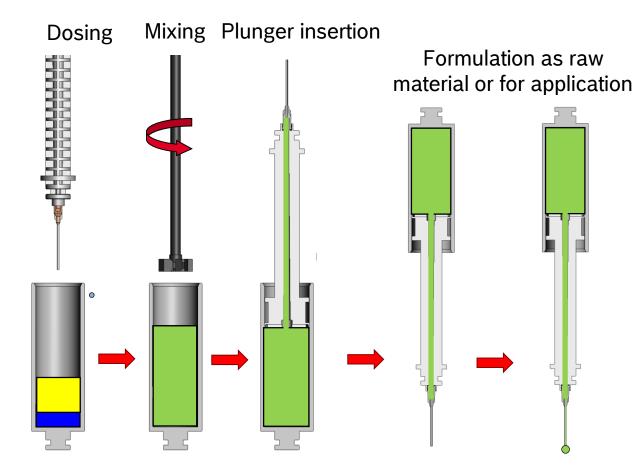

- Dosing and application through aspiration of materials with complex calibration effort
- Does NOT work for materials with high viscosity!

Packaging Technology

EAS - Lab Systems & Custom Solutions

Functionality of the BLS-Syringe

Packaging Technology

Disposable sample container **and** raw material container

BLS-Dosing

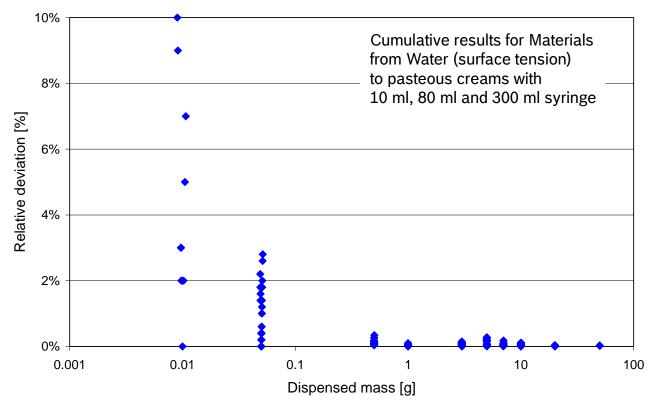

- Gravimetric or volumetric dosing
- Combination with rheometer
 - Dosing under stirring
 - Viscosity adjustment

BLS dispensing: Result overview

- Typically, very good dispensing accuracy
- Limits at very low dispensing amounts for big drop sizes

Packaging Technology

20

Powder Dosing using the Auger Dosing Module

- Different dosing-augers depending on the flowing characteristics of the powder
- Dosing algorithm optimised for accurate dosing even when using high dosing speed

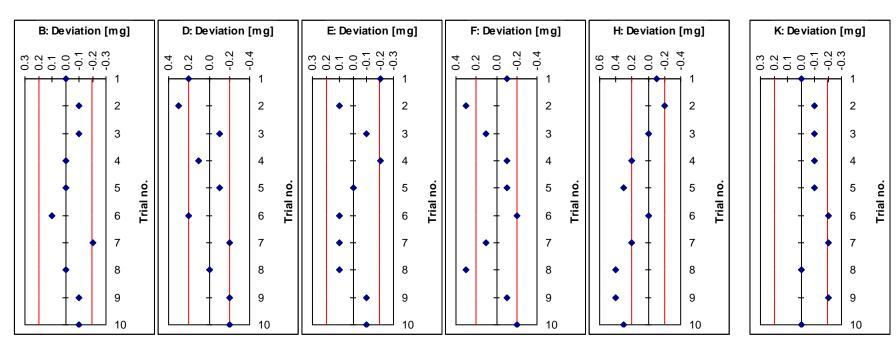

Packaging Technology

21

Dispensing of 6 reference powders

- Target amount: 10 mg
- → Required tolerance: 0.2 mg

Packaging Technology

22

High Shear Mixing/Dispersing

- → SpeedMixer
- Mixing by planetary movements
- No cleaning required
- Milling by addition of beads/spheres
- Short dispersion times
- Degassing in seconds

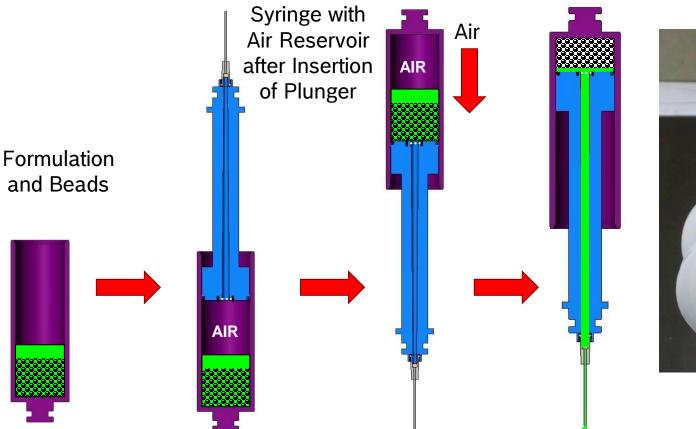

23

How to separate the milling beads from the formulation?

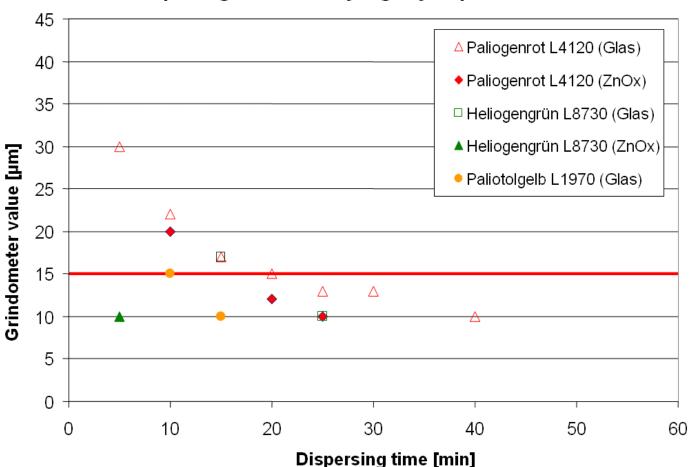

Packaging Technology

24

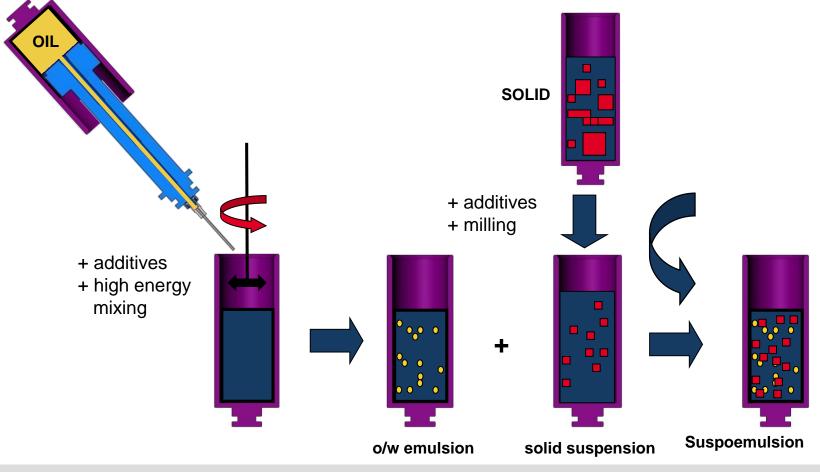

Dispersing in the BLS-Syringe by a speedmixer

Packaging Technology

25

Overview possible formulation technologies

Packaging Technology

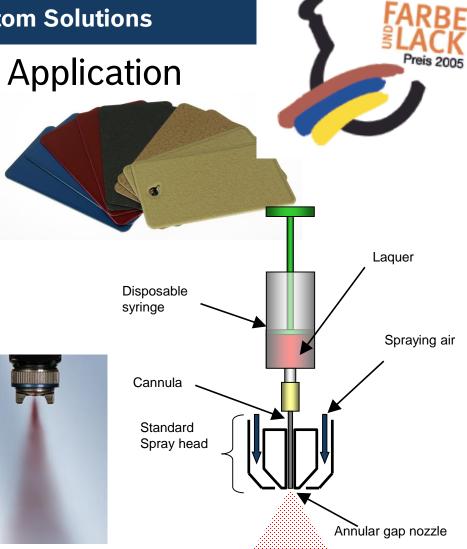

26

EAS - Lab Systems & Custom Solutions

10 years of BLS-Spray Application

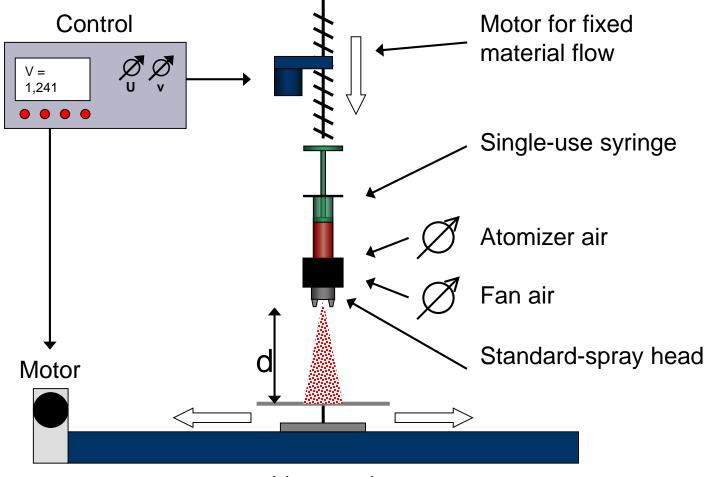

- Cleaning free spray application
- Highly reproducible spray application
- Use of standard or BLSsyringes possible
- Used in R&D and QC

Packaging Technology

27

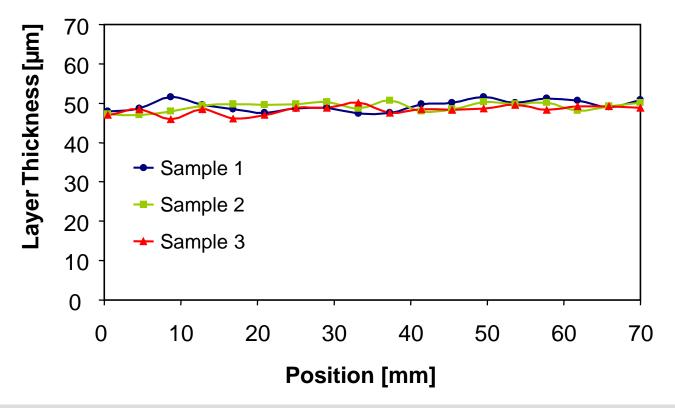

Linear axis

Reproducibility of Layer Thickness (enamel primer)

Packaging Technology

29

Reliability of HT-Sprayapplication

Steps		Standard Spray System	BLS-System
1 x	Thickness [µm]	10 +/-1	8 +/-1
	Δ E (each substrate)	0,48 +/- 0,11	0,24 +/- 0,07
	Δ E (diff. substrates)	0,65 +/- 0,21	0,63 +/- 0,09
2 x	Thickness [µm]	13 +/-1	9 +/-1
	Δ E (each substrate)	0,18 +/-0,07	0,17 +/-0,04
	Δ E (diff. substrates)	0,42 +/-0,09	0,38 +/-0,03

Packaging Technology

Characterisation of the formulation

Rheometer, pH and particle size measuring, gel time

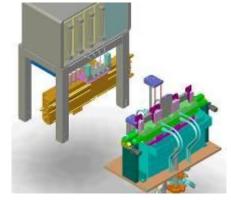

Packaging Technology

31

Characterisation of substrates

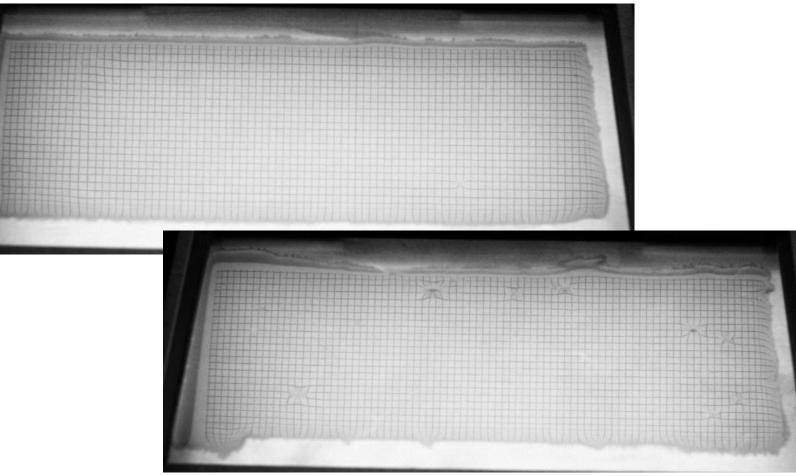

- Spray quality (wet film analysis)
- → Thickness
- Colour
- → Gloss
- → Haze
- Dol
- Chemical resistance
- Scratch resistance
- Cross hatch test
- Hardness testing
- Surface tension
- Drying time
- → Rub-Out-Test
- Mandrel bending

Packaging Technology

Wet Films

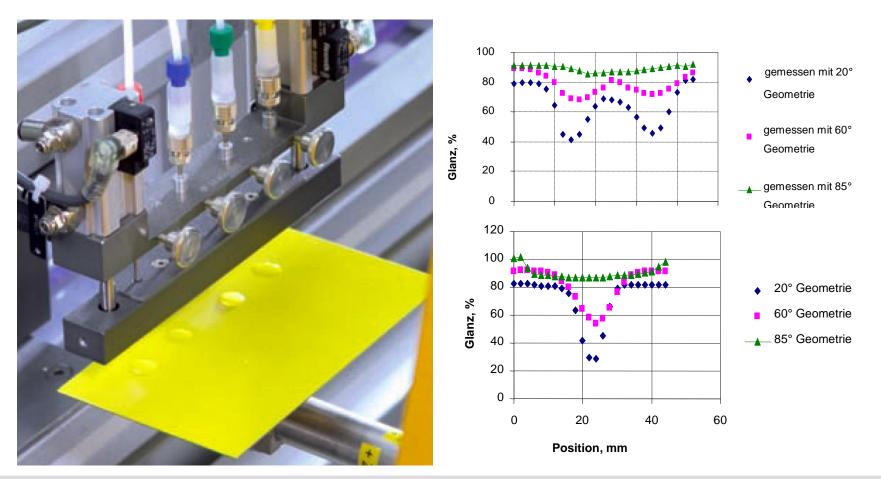

Packaging Technology

Stand-alone spray booth in Quality control

- Improved filtering system
- Fast exchange system for syringes and substrates
- → 200 samples and application per shift
- Starting with correlation of large number of existing spray application with BLS-spray cabin
 - Use of 1 standard spray head for all products
 - Pre-defined standard process parameters for each product
