

Sustainability in Chemical Packaging

Arash Hassanian, SVP Sales & Marketing, Hoover Ferguson

Abstract:

Selecting the right packaging for chemicals can reduce logistics, time and operational efforts, while optimizing costs and increasing safety and sustainability. However, packaging strategies are not one size fits all, and should not be treated as such.

As companies consider ways to increase the sustainability of their packaging solutions through reduced waste, working with a partner can help them. The partner can help in the preparation and development stages through to the execution and implementation, to ensure companies have a packaging solution that best fits their needs.

In this presentation, we will discuss a number of actual examples where bespoke packaging solutions have been developed for partner benefit.
